TARGIT Automotive Backup Procedure US

Cloud Tenants

A cloud tenant is automatically backed up after creation.

Backup content: All files and settings used by the tenants are included in the backup, as well as Data Discovery configuration and data files.

Frequency: Data is backed up daily.

Start time: Backup of cloud tenants starts every day at 1 am CET.

Retention: Backup retention is 30 days.

Central ETL Processing

TARGIT Automotive runs the ETL processes needed to transform the data in a central cloud location. The backups are configured by TARGIT employees.

Backup content: The contents of the ETL process and the data sources synchronized through Data Providers, TARGIT Cloud Connector or other means.

Frequency: Data is backed up daily.

Start time: The backup starts at 11:30 pm CET.

Retention: The backup stores all the ETL processes and data sources with a retention of 1 day as the underlying software takes care of versioning.
